

HairDid Beta Write Up

What's done:

- * all view controllers are set up
- * can create account & login
- * can retrieve data from database
- * rough sketches of the profile editing pages for clients and providers
- * user is directed to appropriate editing page based off of which type of account they have
- * user is directed to appropriate home page based off of which type of account they have
- * tab bar controller is set up
- * user sees a different view of tab bar controller based off of which type of account they have

What's left:

- * further build out the editing pages
 - > Allow provider to upload pictures of services
 - > Allow both users to upload profile pictures
- * gather the information and add to database
- * display "Hinge" formatted provider profiles on client home page and implement buttons
 - > like = heart (stretch: right swipe)
 - > dislike = "X" (stretch: left swipe)
- * display client info and profile pic on provider home page
- * add ClientLikeList button on ClientHomePage
 - > build out VC with display of liked provider info and profile pic
 - > build out VC with list of providers, click leads to a VC with their formatted information (stretch goal)
- * build loading page with animation
- * build settings page and have accessibilities
 - > dark mode

-> maybe dry eye blink reminder (screen would go dark every 5 seconds)

- * add aesthetic animation and format cleaner

- * add a chat to the tab bar and functionality (stretch goal)
